THE BLACK DIAMOND Wireless Combo for your desktop

The Black Diamond wireless keyboard from Amkette comes with much more better and prettier looks than its earlier model with a track ball. It is easier to type on and has an improved performance with responsive keys.

The keys are spaced well, and due to the concave shape the task becomes much more easier. The keyboard gives a smooth and soft experience while typing. Unlike the previous model all the extra multimedia buttons are on the sides rather than on the top. There are six multimedia controls on the left and three on the right.

The Black Diamond has a metal plate inside for extra stability, which also makes the keyboard heavier making it stick to the table firmly. The Black Diamond has a much sturdier and durable body compared to the previous version. The enhanced circuitry design of the keyboard has given it a better and lasting performance on the battery, thereby reducing the power consumption. Another feature of this interface is the save mode - in which the keyboard switches to sleep mode if left untouched for more than four minutes.

This desktop keyboard features a 2.4 GHz technology, giving up to 10 meters of wireless freedom. The Black Diamond is accompanied by a full size wireless mouse with three buttons, featuring the same 2.4 GHz wireless technology with 800 DPI optical engine. The mouse also features the same power saving modes and is very responsive.

Overall the performance of the desktop set is good and is also priced reasonably at Rs. 1,600 for the complete set with 3 years warranty. ■
